

Kurzprotokoll
CCTL019A2205B

Öffentlicher Titel	Long Term Follow-Up of Patients Exposed to Lentiviral-Based CD19 directed CART Cell Therapy (PAVO)
Wissenschaftl. Titel	Patients are enrolled following completion or early discontinuation from a Novartis sponsored or supported study of CD19 directed CAR T-Cell treatment and will be followed for 15 years post treatment from the last CD19 directed CAR T-Cell treatment. Patients will be monitored for safety and efficacy within the primary treatment protocols for the protocol defined duration. While every effort will be made to keep patients in follow-up within the respective treatment protocol itself, patients can drop off treatment protocols at any time. Patients discontinuing from the primary treatment protocols for any reason will be enrolled in this long term follow up (LTFU). This will allow collecting data on long term safety and efficacy (as applicable) as mandated by the health authorities of all patients treated with CD19 CART therapy within the concept of a single protocol. Collection of such long term effects of CD19 CART cell therapy will help to further define the risk-benefit profile of CD19 CART
Kurztitel	CCTL019A2205B
Titel am Standort	Würzburg, CCCMF: CAR-T Long Term Follow Up (LTFU) Study, CCTL019A2205B (PAVO)
Studienphase	Phase II
Erkrankung	Haema: ALL: Alle Linien
Alter	Kinder, Jugendliche und Erwachsene
Status	Aktiv
Prüfzentren	Würzburg: Comprehensive Cancer Center - Mainfranken Volker Kunzmann Kunzmann_V@ukw.de Stephan Mielke Mielke_S@ukw.de
Sponsorart	Industrie Studie
Registrierung in anderen Studienregistern	Europäisches Studienregister 2014-001673-14 Studienregister des NIH NCT02445222 (primäres Register)
